WORK PROCEDURES

controlling Government Regulation:

OSHA's Construction Industry Standard for Occupational Exposure to Asbestos Subpart Z, 29 CFR 1926.1101 Asbestos.

Work-Task Assumptions/Requirements of the Employer at Project Work-Site:

Prior to commencing the demolition and removal of the A-C pipe, the contractor has:

- (1) Determined by thorough inspection the existence and the extent of any ACM.
 - (2) Given written notice to appropriate governmental agency at the beginning of abatement activity.
 - (3) Conducted an Initial Exposure Assessment (IEA) test plan or baseline report, which complies with the criteria in Paragraph (f)(2)(iii) of the above referenced controlling government regulations (section), and which demonstrates that the employees' exposure to airborne asbestos fibers during removal of the Asbestos-Cement (A-C) pipe is expected to be consistently below the Permissible Exposure Levels (PELs) i.e... exposure must be less than 0.1 fiber/cubic centimeter (cc) of air for an eight (8) hour time-weighted average limit (TWA), and less than 1.0 fiber/cc of air as averaged over a sampling period of thirty (30) minutes, all as determined by the method prescribed in Appendix A to the referenced section, or by an equivalent method, and therefore, the employer intends to do the A- C pipe removal through the use of Negative Exposure Assessments (NEAs).
- Procedures for Removal of Asbestos-Cements (A-C) Pipe, Also Commonly Referred to as Transit Pipe. This work activity is identified as a Class II asbestos removal activity by OSHA's Subpart Z, 29 CFR 1926.1101, with the A-C pipe removal is being done utilizing a valid Negative Exposure Assessment (NEA).

Preparation

Establish a regulated work area (RWA) using barricade tape.

- Provide a hand/face wash station at the entry point to the RWA.
- Post asbestos-warning signs at the RWA entry point.
- Establish a waste load-out area attached to the RWA.
- Once an RWA is established and work begins, no access should be permitted without the required personal protective equipment.
- Prior to commencing work a ten day NESHAP notification (DEP Form 62-257 .900(1) Effective 10-12-08) must be submitted the Florida Department of Environmental Protection (FDEP) office located at the following address:

FDEPAir Resource Management
2295 Victoria Avenue, Ste 364
P.O. Box 2549
Fort Myers, Florida 33902-2549

The form can be accessed online at:

[http://www.dep.state.fl.us/air/rules/forms/asbestos/dep62_257_900\(1\).pdf](http://www.dep.state.fl.us/air/rules/forms/asbestos/dep62_257_900(1).pdf) Air Monitoring and Sampling of Exposure to Airborne Asbestos Fibers:

< As the work begins the competent person (or third party consultant) must conduct and record objective data to confirm the Initial Exposure Assessment (IEA), and that the specific job-site work activity confirms the findings of the IEA, and that the PELs are not being exceeded for this work activity.

Excavation:

- < Machine excavate to expose A-C pipe.
- < Hand excavate areas under pipe where cuts/breaks are planned.
- < Excavation operations should be carefully executed so that pipe damage does not occur prior to removal.

Abandonment of AC Pipes

< AC pipes can be abandoned in-place. The procedure for abandonment of pipes in place includes filling the section of pipe with a grout/cement slurry. The location of the pipes should be recorded on the master drawing of the right-of -way.

< At no time will bursting, crushing, grinding or pulverizing of the AC pipe be conducted.

AC Pipe Removal:

All pipe cutting or breaking operations require adequate wetting with potable water to prevent A-C materials from being crumbled by hand pressure and to keep the asbestos fibers from becoming air- borne (friable).

- < Plan pipe cuts/breaks as necessary to accommodate the size/weight of pipe being removed.
- < Use a hammer or wheel-type pipe cutter (or equivalent tool) to make the initial cut and drain the pipe of residual liquids. If gas powered cutters are to be used, they should be connected to a HEPA filtered vacuum and used in a manner that will not create elevated airborne fibers. If a gas-powered cutter is utilized that is not connected to a HEPA filtration system, the work area should be contained to prevent the release of airborne fibers. In addition, a sufficient supply of water shall be applied to the cut point to further prohibit the release of asbestos fibers. A layer of 6 mil polyethylene should be placed beneath the cut point to contain the debris that will be generated. The debris shall be collected and treated as asbestos- containing waste.
- < Remove pipe sections at joint collars by breaking them with a sledgehammer or cutting them with a wheel-type pipe cutter (soil-pipe cutter).
- < Where pipe re-connection is required, trim pipe ends in a manner that will not cause asbestos fibers to become airborne. Any debris that is generated shall be collected and treated as asbestos- containing waste.
- < When applicable, remove pipe sections from trench in an "intact" condition. Wet and containerize waste materials as you go. Using lifting straps and methods that do not damage the pipe remove the material from the

trench.

< WASTE PIPES: The pipe should be placed in a leak tight waste container. An alternative option would be to wrap each section of pipe with two layers of 6 mil polyethylene. For both options water should be applied to each section of pipe before it is contained.

< Identify A-C materials and stockpile the waste in a designated load-out area with the following label warnings: (The label must also identify the generator of the AC Pipe waste).

DANGER Contains Asbestos Fibers
Avoid Creating Dust
Cancer and Lung Disease Hazard

Transportation of Asbestos Waste

All asbestos-containing waste shall be transported to a class I landfill in leak tight containers. Each shipment must be properly marked with the following notation:

DANGER Contains Asbestos Fibers Avoid Creating Dust Cancer and Lung Disease Hazard

< All asbestos-containing waste shall be disposed of in a timely manner at a class I landfill. All waste must be disposed of within a 30-day period from the time of removal. A waste shipment record must be provided for each shipment.
