RE: Sole Source Provider

Aria Filtra (formally Pall Water) a division of Trojan Technologies Corp. is the sole source provider of specific equipment, ancillary components, and programming incorporated into your Microfiltration System. The sole source products/services include but are not limited to the following:

- UNA-620A Modules and associated fittings as it relates to installation of these filters.
 - The UNA-620A membrane can only be sourced from Aria Filtra.
 - The UNA-620A uses proprietary crystalline PVDF which minimizes fiber breakage and increases the in-situ life of the filter.
- Aftermarket Service execution on the AriaFiltrate MF Maintenance Agreements including Inspection, CIP, 24/7 Technical Phone Support and associated hardware and training packages, i.e. "Field Service"
- Proprietary controls and associated hardware for the MMI and PLC interface computer.
- Programming and subsequent changes for all operations.

The Aria Filtra proposal OPP2151137 for the module replacement has components that are proprietary in nature and protected under Aria Filtra intellectual property.

Please feel free to contact me if you have any further questions.
