

# TEN THOUSAND TREES IN TEN YEARS

Establishing an Urban Forest Master  
Plan for Marco Island

Prepared by David Leaser,  
Marco Island Beautification Committee

## VISION

# Establish an Urban Forest Master Plan for Marco Island

Marco Island's trees are a vital part of our green infrastructure that provides economic and environmental benefits. We must establish best practices in tree planting, preservation, and maintenance and foster a sense of stewardship among our residents.

# TREES INCREASE OUR SAFETY

Reduce traffic speeds by up to  
15 mph ([Burdett](#))

Create safer sidewalk walking  
environments ([Wallace](#))

Reduce road rage ([Suss](#))

Lengthen pavement life by 40%  
to 60% ([Boalder](#))

# TREES GENERATE VALUE

**\$90,000** of direct benefits for every tree ([Wardle](#))

**12% higher income** streams for businesses ([Wardle](#))

**15% increase** in home or business value. ([Wardle](#))

**50% reduction** in air conditioning costs ([Bullock](#))

# TREES PROTECT THE ENVIRONMENT

**Prevent soil erosion** by slowing runoff and hold soil in place ([Buzick](#))

**Prevent water pollution by 30%** allowing water to flow down the trunk into the earth ([Buzick](#))

**Reduce CO<sup>2</sup>** the equivalent of 26,000 car miles, per one acre of trees ([Tree People](#))

# TREES IMPROVE OUR HEALTH

5 to 15-degree temperature  
reduction ([EPA](#))

Increase wildlife and natural  
pest control ([Tree People](#))

50% reduction in UV-B radiation  
([Tree People](#))

Oxygen for 18 people, per one  
acre of trees ([Tree People](#))

# TREES ENHANCE WELL BEING

ADHD and stress reduction in  
adults and children ([Wolff](#))

31% lower odds of  
developing **psychological  
distress** ([Phyllis.org](#))

33% lower odds of rating general  
health as "fair" or "poor" ([Phyllis.org](#))

## PROBLEM

# Florida has lost 26% of its tree coverage since 2000

[Global Forest Watch](#)

### TREE COVER LOSS IN FLORIDA, UNITED STATES

From **2001** to **2020**, **Florida** lost **1.95Mha** of tree cover, equivalent to a **26%** decrease in tree cover since **2000**, and **702Mt** of CO<sub>2</sub>e emissions.

The methods behind this data have changed over time. Be cautious comparing old and new data, especially before/after 2015. [Read more here.](#)

2000 tree cover extent | >30% tree canopy | these estimates do not take tree cover gain into account

Collier had the most tree cover at 309kha compared to an average of 107kha

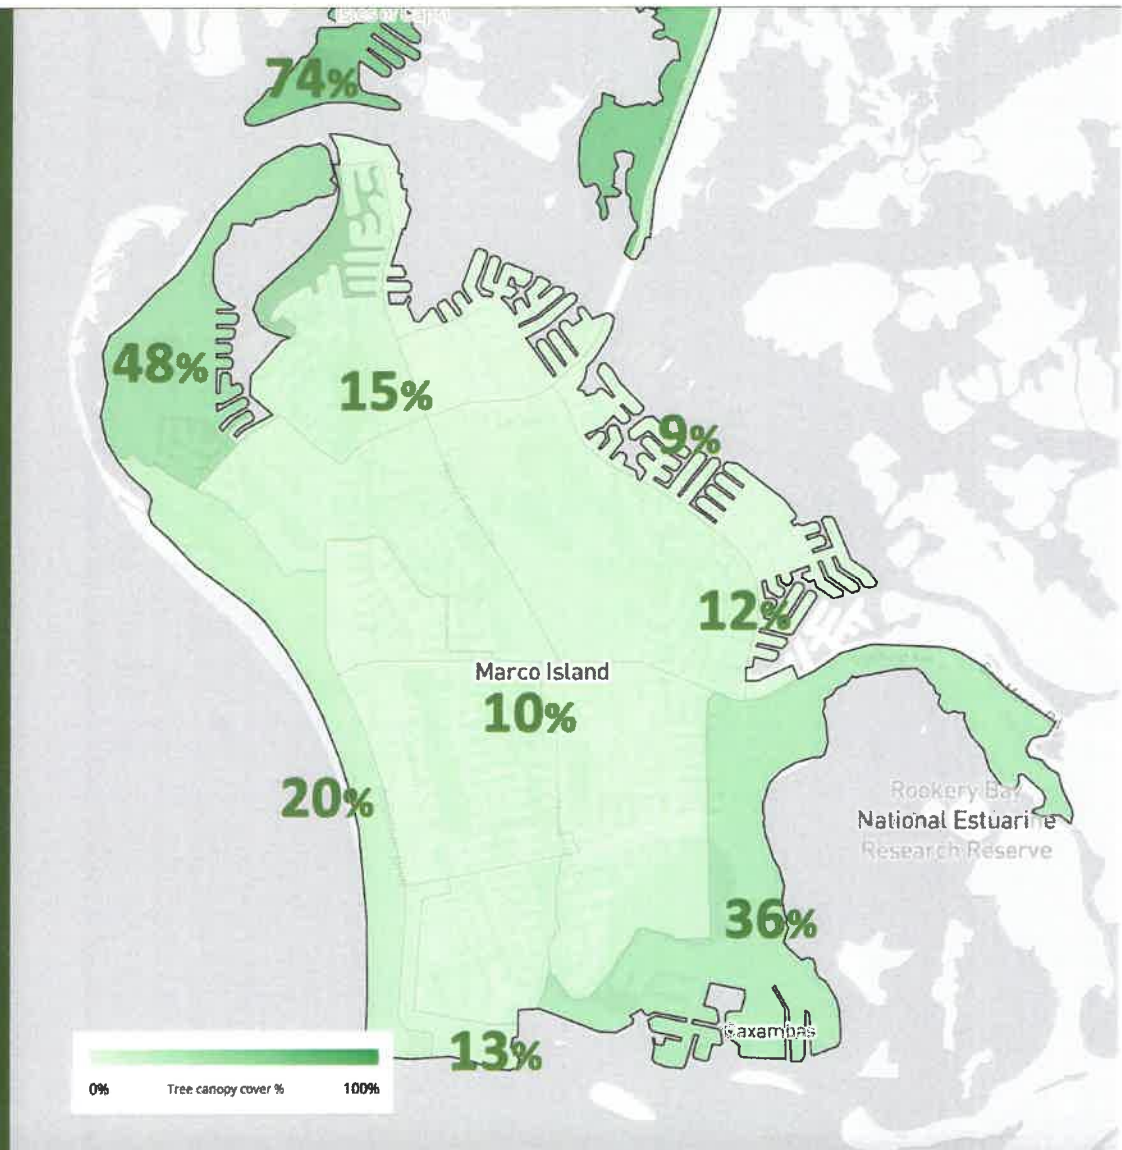

## PROBLEM

# Marco Island's tree density is extremely low

The national average  
is 27%.

[Tree Canopy Score](#)

PROBLEM

**Many of Marco Island's arterials and surface streets have not been planted**

VALUE

# Ten thousand trees will dramatically reduce CO2, runoff and electricity demand on Marco Island

**Palm  
(Royal Palm)**

SAVINGS PER 10K TREES		
12,210,000	CO2 Avoided (pounds)	90,000,000
90,000,000	CO2 Sequestered (pounds)	340,000,000
23,000,000	Electric Energy Saved (kWh)	70,000,000
2,150,000,000	Rainfall Interception (gallons)	1,190,000,000
190,000,000	Avoided Runoff (gallons)	110,000,000

**Broadleaf Tree  
(Magnolia)**

Estimates are from i-Tree planting data, showing value over the 40-year life of a tree with a 10% mortality rate

VALUE

# It doesn't take many trees to make a difference

**TWO ROYAL PALMS INTERCEPT THE RUNOFF  
OF AN ENTIRE POOL IN A SINGLE YEAR**

**FOUR MAGNOLIAS OFFSET THE CO2 OF AN  
AVERAGE CAR IN A SINGLE YEAR**

Estimates are from i-Tree planting data, showing value over the 40-year life of a tree with a 10% mortality rate. One palm reduces 5,850 gallons per year in rainfall interception and runoff avoidance. Average car CO2 per year is 4,830 pounds per year in Florida, so 4 magnolias (at 1,075 pounds each) can sequester the CO2 of a car every year

## ACTION PLAN

# Ten thousand trees in ten years!

### Assess our current state

Establish an inventory of street trees and identified gaps in arterials and surface streets

### Develop a master plan

Establish a master plan for the island's streets and green spaces, including programs and policies to encourage planting

### Execute the plan

Complete arterial tree planting, plant side streets, educate builders & community on tree planting, seek funding

**To plant a tree is  
to believe in  
tomorrow.**

## REFERENCE

# Recommended trees for Marco Island

Highest Wind Resistance
<b>Dicots</b>
<i>Bursera simaruba</i> , gumbo limbo
<i>Carya Floridana</i> , Florida scrub hickory
<i>Conocarpus erectus</i> , buttonwood
<i>Chrysobalanus icaco</i> , cocoplum
<i>Cordia sebestena</i> , geiger tree
<i>Eugenia axillaris</i> , white stopper
<i>Eugenia confusa</i> , redberry
<i>Eugenia foetida</i> , boxleaf stopper
<i>Guaiacum sanctum</i> , lignum vitae
<i>Ilex cassine</i> , dahoon holly
<i>Krugiodendrum ferreum</i> , ironwood
<i>Lagerstroemia indica</i> , crape myrtle
<i>Magnolia grandiflora</i> , southern magnolia
<i>Podocarpus</i> spp, <i>podocarpus</i> <i>Quercus virginiana</i> , live oak
<i>Quercus geminata</i> , sand live oak
<b>Conifers</b>
<i>Taxodium ascendens</i> , pondcypress
<i>Taxodium distichum</i> , baldcypress

Medium-High Wind Resistance
<b>Dicots</b>
<i>Annona glabra</i> , pond apple
<i>Calophyllum calaba</i> , Brazilian beautyleaf <sup>a</sup>
<i>Chrysophyllum oliviforme</i> , satinleaf
<i>Coccoloba uvifera</i> , sea grape
<i>Coccoloba diversifolia</i> , pigeon plum
<i>Liquidambar styraciflua</i> , sweetgum
<i>Lysiloma latsilqua</i> , wild tamarind
<i>Magnolia virginiana</i> , sweetbay magnolia
<i>Nyssa sylvatica</i> , black tupelo
<i>Sideroxylon foetidissimum</i> , mastic
<i>Simarouba glauca</i> , paradise tree
<i>Swietenia mahagoni</i> , mahogany
<b>Conifers</b>
N/A

<sup>a</sup> Prohibited from use in Florida

<sup>b</sup> Invasive and not recommended for use in Florida

<sup>c</sup> Caution: may be used but must be managed to prevent escape in Florida (Fox et al. 2005)

\*Wind resistance of tropical and subtropical tree species as estimated utilizing the hurricane measurements and the survey results in this study, and the scientific literature cited throughout this publication.

## REFERENCE

# Recommended trees for Marco Island

### Medium-Low Wind Resistance

#### Dicots

*Acer rubrum*, red maple  
*Bauhinia blakeana*, Hong-Kong orchid  
*Bucidas buceras*, black olive  
*Callistemon spp.*, bottlebrush  
*Cinnamomum camphora*, camphor<sup>b</sup>  
*Delonix regia*, royal poinciana<sup>c</sup>  
*Enterolobium cyclocarpum*, ear tree  
*Eriobotrya japonica*, loquat<sup>c</sup>  
*Eucalyptus cinerea*, silverdollar eucalyptus  
*Ficus aurea*, strangler fig  
*Kigelia pinnata*, sausage tree  
*Myrica cerifera*, wax myrtle  
*Persea borbonia*, redbay <sup>P</sup>  
*latanus occidentalis*, sycamore  
*Quercus laurifolia*, laurel oak  
*Tabebuia heterophylla*, pink trumpet tree  
*Terminalia catappa*, tropical almond<sup>c</sup>

#### Conifers

*Pinus elliottii*, slash pine  
*Pinus palustris*, longleaf pine

#### Palms

N/A

#### Fruit Trees

*Averrhoa carambola*, star-fruit, carambola  
*Citrus spp.*, oranges, limes, grapefruits  
*Mangifera indica*, mango

### Lowest Wind Resistance

#### Dicots

*Casuarina equisetifolia*, Australian pine<sup>a</sup>  
*Cassia fistula*, golden shower  
*Chorisia speciosa*, floss-silk tree  
*Ficus benjamina*, weeping banyan  
*Grevillea robusta*, silk oak  
*Jacaranda mimosifolia*, jacaranda  
*Melaleuca quinquenervia*, melaleuca<sup>a</sup>  
*Quercus nigra*, water oak  
*Peltophorum pterocarpa*, yellow poinciana  
*Prunus caroliniana*, Carolina laurelcherry  
*Sapium sebiferum*, Chinese tallow<sup>a</sup>  
*Spathodea campanulata*, African tuliptree  
*Tabebuia caraiba*, silver trumpet tree  
*Ulmus parvifolia*, Chinese elm

#### Conifers

*Araucaria heterophylla*, Norfolk Island pine  
*xCupressocyparis leylandii*, Leyland cypress  
*Juniperus silicicola*, southern red cedar  
*Pinus clausa*, sand pine

#### Palms

*Syagnus romanzoffiana*, queen palm<sup>c</sup>  
*Washingtonia robusta*, Washington fan

#### Fruit Trees

*Persea americana*, avocado

VALUE

# A single tree dramatically reduces CO2, runoff and electricity demand on Marco Island

**Palm**  
**(Royal Palm)**

SAVINGS PER TREE*		
1,221	<b>CO2 Avoided</b> (pounds)	9,000
9,000	<b>CO2 Sequestered</b> (pounds)	34,000
2,300	<b>Electric Energy Saved</b> (kWh)	7,000
215,000	<b>Rainfall Interception</b> (gallons)	119,000
19,000	<b>Avoided Runoff</b> (gallons)	11,000
