

Water Quality Issues Prioritization Matrix

The City Council of Marco Island is approaching budget season. During this time of the year, the City Council must review every issue and prioritize the allocation of the available finite resources to all the programs that may improve the quality of the water around Marco Island. The Waterways Advisory Committee can support this process by offering our recommendations for the issues, studies and policy changes that we believe will provide the maximum return on the tax dollars invested. We can also add to this list any issues or programs that we believe have been overlooked.
