SAVING FLORIDA'S GOPHER TORTOISES

WHY IS MY BURROW IMPORTANT?

I am a keystone species. My burrow is home to 385+ species like:

- Indigo snakes
- Florida mice
- Gopher frogs
- Burrowing owls

WATCH YOUR STEP

We dig burrows on land 8-12" deep and up to 40' long! Using our powerful front forelegs, we dig our burrows deep to escape the Florida heat! Our eggs are usually laid in a sandy area outside the burrow entrance.

I'M PROTECTED DON'T TOUCH ME OR MY BURROW

It is a violation to intentionally take, harass, wound or kill any species designated as endangered, threatened, or "of special concern."
S. 379.411, Florida Statutes - Violators may be guilty of a third-degree felony.

ABOUT US

Gopher tortoises are one of the oldest living animals on Earth, with many of us living to be 80 years or older! As adults, we have no natural native enemies, except humans. On average, we're 10 inches long and weigh up to 10-12 lbs. We are reproductively mature at 10 years or older and lay 3-5 eggs in a clutch. We have an internal GPS unit that allows us to always find our way back home to our burrow.

**I DON'T SWIM!
DON'T PUT ME IN THE WATER!**
